The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized corpus striatum library cDNA Library Preparation: M.B. Soares Lab Clone distribution: NIH BMAP cDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, the record will be updated accordingly when that means is determined.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         oligonuclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized basal ganglia library cDNA Library Preparation: M.B. Soares Lab Clone distribution: NIH BMAP cDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, this record will be updated accordingly when that means is determined. Seq primer: M13 Forward
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  POLYA-Yes

                                                                                                                                                                                                                                                                                                                                                                                                          GRATAGTCGAGGTCAAT 3'. The cDNAs were size-selected and amplified by long-range PCR using Ex Taq polymerase for 18 cycles. The PCR-amplifiable cDNA mixture went through one round of equalization and was digested with Sall/NotI and cloned into the Sall/NotI sites of the pSPORTI plasmid vector (Life Technologies). The library was constructed by Dr. Minoru S. H. Ko and Dr. Xiaohong

Center clone name: 22_F_10

* NOTE: This record contains 76 individual
```

NOTE: This record contains 76 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will 10817 preserved. 10033 9263 8485 6909 6158 7693 5395 4640 3842 3048 2285 1540 755 3841: 6157: 4639: 3047: 7692: 1539: 754: contig of 754 bp in length gap of contig gap of contig gap of gap of contig unknown le g of 775 bp unknown le unknown length of 778 bp in length unknown lengt of 763 bp in unknown lengt of 755 bp in unknown length of 794 bp in length unknown length of 770 bp in length unknown length of 792 bp in length unknown length of 784 bp in length unknown length of 751 bp in length unknown length of 798 bp in length of 785 bp unknown of 784 bp in length unknown length of 763 bp in unknown of 745 bp in unknown length of 785 bp in unknown length length

AL Submitted (13-MAY-1999) Drosophila Genome Center, Lawrence Berkeley, Laboratory, MS 64-121, Berkeley, CA 94720, USA
On Aug 2, 1999 this sequence version replaced gi:5629947.
For further information about this sequence, including its location and relationship to other sequences, please visit our sequence archive Web site (http://www.fruitily.org/sequence/) or send email to bdgp@fruitfly.berkeley.edu. All contigs in this submission meet the following cutoffs: length >= 200 bases.
* NOTE: This is a 'working draft' sequence. It currently consists of 79 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence as soon as it is available and the accession number will
* be preserved.
